ODOO × GCET Hackathon

THE ROYAL KNOT

Wedding Planning Management System

A Unified, End-to-End Platform for Planning, Coordinating and Delivering luxury Weddings.

Plan | Coordinate | Manage Vendors | Control Finances | Measure Profitability

Problem & Opportunity

The Challenge

A high-end wedding agency struggling with fragmented, manual operations.

- Enquiries lost in calls & WhatsApp
- Vendor quotes in different PDFs
- Checklists in paper diaries
- Payments tracked in notebooks
- Profitability known only after the wedding

Our Opportunity

A unified, real-time platform that takes a couple from the first enquiry to the final vendor payment.

- Digital Planning
- Vendor Coordination
- Payment & Cost Control
- Real-time Event Execution
- Season Profitability

Our Solution

A unified, end-to-end platform to plan, execute, and financially close luxury weddings with complete control.

- Enquiry & Consultation
- Digital Agreements & Booking
- Vendor Quotes & Selection
- Auto Wedding Plan (25+ Tasks)

- Real-time Event Execution
- Payments & Extra Costs
- Profitability & Season Review
- Role-based Access (Founder, Planner, Vendor, Client, Family)

Key Features

Enquiry & Consultation

Capture enquiries, schedule meetings and convert to bookings.

Vendor Quote Comparison

Compare quotes line-by-line and award the best vendor.

Wedding Planning & Tasks

Auto-generated plan (25+ tasks) with owners, stages and timelines.

Real-time Event Execution

Live event schedule, vendor check-in and instant delay alerts.

Payments & Extra Costs

Track milestone payments, extras (e.g., +60 guests) and vendor settlements.

Profitability & Season Review

Know which weddings made money with complete financial insights.

System Architecture

Users (Role-based Access)

- **Founder** (Business Overview)
- **Planner** (Planning & Coordination)
- **Coordinator** (On-ground Execution)
- **Finance** (Payments & Settlements)
- **Vendor** (Quotes, Check-in, Invoices)
- **Client / Family** (Bookings, Updates, Approvals)

Application Layer

Frontend (React 19 + Vite)

REST API (Secure)

Backend (Node.js + Express)

- Business Logic
- Role & Access Control
- Workflow Engine
- Notifications

Data & Integrations

- **PostgreSQL / Neon** (Application Database)
- **Supabase Storage** (Contracts, Photos, Documents)
- **Email / SMS Alerts** (Updates & Reminders)
- **Digital e-Sign** (Service Agreements)

Tech Stack

React 19	Tailwind CSS	Node.js + Express	PostgreSQL / Neon	Supabase	Motion
(UI)	(UI Styling)	(Backend API)	(Database)	(Auth & Storage)	(UI Animations)

Workflow – Wedding Lifecycle

From the first enquiry to the final settlement — a single, connected flow.

1. Enquiry & Consultation

- Capture enquiries
- Schedule meetings
- Convert to booking

2. Agreement & Proposal

- Send proposal & quote
- Digital e-sign agreement
- Receive booking payment

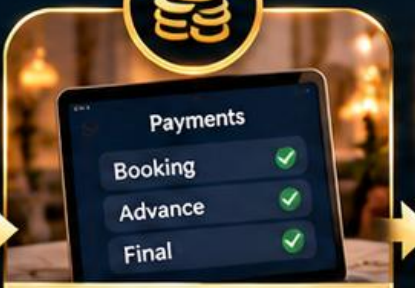

3. Wedding Planning

- Auto-generate 25+ tasks
- Assign owners & stages
- Track vendor readiness

4. Event Execution (Live)

- Real-time run sheet
- Vendor check-in & alerts
- On-ground coordination

5. Payments & Settlements

- Client milestone payments
- Extras (e.g., +60 guests)
- Vendor final settlements

6. Season Review & Insights

- Wedding-wise profit
- Cost vs. budget analysis
- Overall season performance

Outcome

- No missed leads
- Coordinated team & vendors
- Controlled costs
- Higher profitability

Impact & Results

A smarter, more coordinated and profitable wedding operations platform.

60% ↓
Less planning & coordination time

25–30% ↑
Higher profitability per wedding

90% ↑
Better vendor & team synchronization

Zero
Missed payments & pending tasks

Key Benefits

- Single source of truth
- Real-time operations
- Complete financial visibility
- Audit-ready records
- Scalable for 25+ weddings per season

Thank You !
